US announced fresh tariffs on a slew of Chinese imports such as semiconductors and EVs. The steep hike in tariffs is over and beyond the tariff increase announced earlier under US' former President. This has led to calls of retaliatory action by China. Trade tensions between two of the world's largest economy can have wide ranging impact on global trade which has just started showing signs of a recovery. Separately, US PPI inched up to 0.5% in Apr'24 (est. 0.3%) from a revised decline of 0.1% in Mar'24 (MoM), led by higher services inflation. The data suggests underlying price pressures in the economy, a view also echoed by the Fed Chair. In his remarks, the Fed Chair noted that progress on inflation has been slower than expected warranting the need for higher rates. In India, WPI inched up to 13-month high, led by higher food and fuel prices.

- Barring Hang Seng and China, global stocks ended higher. Investors monitored US PPI data and upbeat earnings from tech companies. In China, traders remained cautious amidst reports of government's support to real estate sector. Sensex rose by 0.5%. It is trading further higher today. On the other hand, Asian stocks are trading mixed monitoring imposition of new US tariffs on China.

- Global yields closed mixed. US 10Y yield moderated ahead of CPI data which is expected to show some moderation. However, the recent statement of Fed officials pointed to continuation of a restrictive approach. In UK, yield remained stable monitoring employment data. Germany's 10Y yield firmed up despite a stable CPI reading. India's 10Y yield fell a tad. It is trading at 7.09% today.
