

Broad based expansion in industrial activity

India's industrial output surprised positively in Oct'20 at 3.6% from an increase of 0.5% in Sep'20. Consumer durables output jumped by 17.6%, a 5-year high, infra goods by 7.8% and FMCG by 7.5%. Even capital goods output increased by 3.3%, first expansion since Jan'19. While high frequency indicators suggest marginal cooling off in Nov'20 as seen in domestic PMIs, E-Way bills, exports and electricity generation. However, government spending is likely to pick-up thus driving growth upwards.

IIP bounces back: Industrial output jumped to eight month high of 3.6% in Oct'20 compared with 0.5% increase seen in Sep'20. This was driven by sharp pick-up in electricity and manufacturing (both at 8 month high). Electricity production rose by 11.2% from 4.9% in Sep'20 and manufacturing output was up by 3.5% from a 0.2% contraction seen in Sep'20. Only mining output fell, by 1.5% in Oct'20 after increasing by 1.4% last month.

Consumer durables output accelerates: Consumer durables output expanded to a 5-year high of 17.6% in Oct'20 from 3.4% in Sep'20. Both FMCG and infra goods registered sharp growth at 7.5% and 7.8% respectively in Oct'20. So is the case with capital goods which rose by 3.3% in Oct'20 compared with a decline of 1.3% in Sep'20. Even intermediate goods registered positive growth at 0.8% in Oct'20 (decline of 1% in Sep'20). However, growth in primary goods contracted further to 3.3% in Oct'20 from a decline of 1.5% in Sep'20 led by coke and refined petroleum products.

Recovery will be tad slower: While Oct'20 industrial output has surprised positively, growth is showing some signs of tapering off. High frequency indicators such as e-way bills (8.1% in Nov'20 against 21.4% in Oct'20), lower manufacturing PMI (56.3 in Nov'20 from 58.9 in Oct'20), merchandise exports at (-) 9.1% in Oct'20 versus (-) 5.1% in Oct'20 and electricity output (3.5% in Nov'20 against 12.1% in Oct'20) confirms this. However, there is room for upward surprise in government spending which can drive GDP growth. Hence, we believe there is a high probability of upward revision to our GDP growth forecast of (-) 8.2% in FY21.

KEY HIGHLIGHTS

- IIP growth at 3.6% in Oct'20.
- Manufacturing output at 8-month high at 3.5% in Oct'20.
- Consumer durable output rises sharply. Capital goods expands after 21 months.
